

BERNER CONSTRUCTION, INCORPORATED PROJECT SUMMARY

Project Title: New Building Construction for the a Pallet Manufacturing Company

Location: Sadsburyville, PA

Scope: Construction management and foundation installation for the construction of a new pallet manufacturing facility.

Berner Construction provided the construction management and the site civil services for the construction of a new 115,000 square foot pallet manufacturing facility. The new facility consists of a manufacturing building, plant offices, pallet drying system, dust collector, and dust storage bins. The civil construction involved the survey, layout, excavation, and structural backfill for 2,600 linear feet of building foundation, retaining walls and equipment pads. Berner also completed the excavation for the underground utilities, foundations for two wood drying kilns, and multiple loading docks.

Berner Construction provided the services for structural backfill of the building interior and placement of 10,000 tons of subgrade stone for the access road and parking areas. Berner completed the site layout and final grading for the paving of the manufacturing areas and perimeter staging and parking areas.

Other services provided by Berner includes the construction of two fire-proof concrete block storage areas for saw dust recycling and the installation of the on-site sanitary system.
